

# SUSTAINABLE DEVELOPMENT GOALS

**7.2.1 Have a policy in place for ensuring all renovations or new builds are following energy efficiency standards?.**

**At UBT, sustainability is a priority, and our commitment is reflected in our comprehensive Energy Policy, which is dedicated to minimizing energy consumption and waste across our campus (See Evidence NO 7.2.1) . This policy emphasizes integrating energy-efficient solutions in both existing and new buildings. Examples include the installation of motion detection sensors to optimize lighting usage, ensuring lights are only on when necessary. Additionally, the policy guides the replacement of HVAC systems with advanced, energy-efficient options to significantly reduce energy demand without compromising comfort.**

**These efforts underscore UBT’s commitment to sustainable practices, helping reduce our carbon footprint and align with global sustainability goals.**
